In re: 09/674,277

Please search SEQ ID NO:1 and 2. Please include and interference and commercial database search. Please print out top 50 hits in each category.

Thanks, Patricia A. Duffy CM1-8D05 AU 1645 703-305-7555

	MO	Run	Title: Perfect Sequence	Scoring	Sear	Total	Mini	Post	. Database	

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes inplemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CATION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, 9tg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                               tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CBIO ISA Unite de Genetique Moleculaire Bacterienne, Institut Pasteur, 28 rue du Docteur Roux, 75724 Paris Cedex 15, France E-mail: parkhill@sanger.ac.uk On Jun 20, 1998 this sequence version replaced gi:2911087.
